The OpenSees Days

Modeling, analysis and design of structures in seismic zones

OpenSees, developed in Berkeley in the 90ies, is a powerful open source structural analysis program that allows simulating the response of structural and geotechnical systems subject to actions of various types, including seismic.

Since 2006 the OpenSees Days are a constant appointment in the USA.

This year the OpenSees Days Italy will be held at the Campus of the University of Salerno in Fisciano, to constitute a meeting point for researchers and practitioners on topics relevant to modeling, analysis and design in the fields of structural and earthquake engineering.

In this year's conference, we are proud to have the keynote speeches of world-renowned scientists:
Filip Filippou, Sashi Kunnath, Xinzheng Lu, Frank McKenna, Asif Usmani.
